Game Theme & Graphics

They may not be the prettiest flowers you have ever seen, but these flowers positively exude flower power - double flower power to be exact!

With double symbols in both the main game and Free Spins that literally behave the same as two individual symbols, the win chances go way beyond the usual maximum 5 symbols on a bet line.

Main Game

Flowers Touch™ is a video slot developed for mobile touch devices. Players can select the coin value and bet level before starting the game round.

- **Game rounds:** When the player taps the spin button, the amount bet is debited from the current credit. The reels automatically come to rest. The player can stop the reels during the initial spin by tapping anywhere in the game area.
- **Game results:** At the end of the game round, the game highlights the winning lines and how much has been won on each line. The total winnings are added together and shown in the Win banner. The amount won is added to the Cash and Coins display.

Stacked Wild

For added excitement, Flowers Touch™ has Stacked Wild symbols in Free Spins. Wild symbols appear in stacks of 3 on the reels – the chance for big wins has never been better.

Wild symbol substitutes for all symbols except for the Free Spin and Double symbols.

Double Symbols

Flowers Touch™ is the first game in Net Entertainment's video slot offering to feature Double symbols, a new element which provides the potential for more and bigger wins.

Essentially, Double symbols count as two single symbols in one and display a pair of single symbols.

With all medium win symbols appearing either as single or Double symbols, wins can occur with as few as 3 matching symbols to as many as 10 on a single bet line.

Payout information for wins with Double symbols can be seen on the Paytable.

Randomisation

RANDOM NUMBER GENERATOR (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

ALGORITHM FOR A RANDOM REEL POSITION

A reel represents an array of symbols where each symbol has an index ("a position").

1. A random number between 0 (zero) and the length of the reel is acquired.
2. The random number is added to the game as "the new reel position to use".

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

Further information on management of malfunctions is also described in section 3.2.1 of the Gaming Platform (Progetto Della Piattaforma Di Gioco) document. This document provides details on how a player is informed of balance return payments and the technical process.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
