Video slot elements

Game Theme and Graphics

The game display comprises three main elements - video display area, keypad area, and game panel.

Video display area. The main game reels and Free Spin reels are displayed in this upper area. In addition, the Paytable button and information about the maximum possible coin win are shown.

Keypad area. The keypad area shows the bet level (i.e. the number of coins wagered per bet line), the available cash in coins, and the current coin value. This area also contains the main game buttons used to select the bet level, coin value, and to start playing the game.

Game panel. The game panel at the bottom houses the buttons for the game settings, audio, and autoplay menus, and the game rules. This area also displays the player's account information and alternates between showing the available cash, current bet, amount won, and player mode (when in Play for Fun mode).

Realistic looking reel spin

Main Game

Players can select the coin value and bet level before starting the game round.

- **Game actions.** The buttons on the key pad perform the following different game actions:

	<p>Clicking the left and right arrows increases and decreases the bet level (i.e. number of coins per bet line) by 1. To increase or decrease faster, the player can click and drag the slider below.</p>
	<p>Clicking the Spin button starts a game round at the current bet level and coin value.</p>
	<p>MAX BET plays the game at the highest bet level and the current coin value.</p>
	<p>Clicking the left and right arrows increases and decreases the coin value to the next level. To increase or decrease faster, the player can click and drag the slider below.</p>
	<p>Clicking AUTOPLAY automatically plays the game for the selected number of rounds.</p>

- **Game rounds.** When the player clicks the spin button, the amount bet is debited from the current credit (available coins and credit). The reels automatically come to rest.
- **Game results.** Players can win on any of the bet lines on which they bet. The game highlights which lines are winners and how much has been won on each line. The total winnings are added together and shown in the Win box. The amount won is added to the cash and displays in the game panel.
- **Reel spin acceleration.** Anticipation of winning is enhanced

with a reel spin acceleration that starts when 2 Scatters appear on the first 4 reels.

Wild symbol

Wild Substitution

Piggy Riches™ has an animated Wild symbol when displayed on a winning bet line.

Substitution. Wild symbols substitute for any other symbol except Scatter symbols to complete winning bet lines. Winning bet lines using Wild symbols will multiply the coin win by 3.

Wilds in Free Spins. Winning bet lines with Wild symbols will multiply the coin win by up to 18.

Scatter symbol

Scatters and Free Spins

Piggy Riches™ features clickable Scatter symbols. When the Scatter symbols trigger Free Spins, the player must select one of them in order to start playing. Each Scatter symbol shows different Free Spins/multiplier combination for the player to choose from. See Payout section for details.

Scatter wins. The main game pays out on 2 or more Scatters. These wins pay the multiplier displayed in the paytable multiplied by the total bet.

Free Spins feature. When 3 or more Scatter symbols appear, the Scatter symbols change to reveal Free Spins and multiplier combination. The player is instructed to choose one of the win options. The Free Spins are played at the same bet level and with the same number of bet lines and coin value as the game that triggered the Free Spins. A dynamic sign informs players how many Free Spins are remaining and the multiplier.

Re-triggered Free Spins. During Free Spins each additional Scatter gives one extra Free Spin.

Paytable

Main slot winnings are paid out depending on the symbols displayed on a bet line when the reels come to a stop. For a combination of regular symbols to be a winning combination, at least 1 of the symbols must be displayed on the first slot reel, and the remaining symbols must be next to each other on the enabled bet line.

Players click the Paytable button to display the paytable page which shows the payout and rules for all of the symbols.

Click the x button to return to the main game.

Randomisation

RANDOM NUMBER GENERATOR (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

ALGORITHM FOR A RANDOM REEL POSITION

A reel represents an array of symbols where each symbol has an index ("a position").

1. A random number between 0 (zero) and the length of the reel is acquired.
2. The random number is added to the game as "the new reel position to use".

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
