GAME DESIGN

Cluster win

Wild symbol

Expanding Wilds

Re-Spins

Cluster Pays™ Mechanic

A symbol is part of a cluster if it is horizontally or vertically adjacent to the same symbol. 5 or more of the same symbols appearing in a cluster, award a win according to the Paytable.

Multiple clusters of the same symbol that are not adjacent to each other pay as separate clusters.

Wild substitutions

Wild symbols can appear anywhere on the reels in the main game and in Re-Spins, and substitute for all symbols. Wild symbols substitution pays the highest possible winning combination on a bet according to the Paytable.

Expanding Wilds

One or more Wild symbols landing anywhere on the reels in the main game, automatically expand to cover the entire reel they land on and then activate a Re-Spin. Wins are awarded after all Wilds have expanded and before a Re-Spin starts.

Re-Spins

One or more Wild symbols landing anywhere on the reels in the main game activate Re-Spins. The Wild symbols expand to cover the entire reel and remain in place while the other reels re-spin.

One or more Wild symbols landing anywhere on the reels in Re-Spins activate an additional Re-Spin. Re-Spin wins are added to any wins from the initial spin. When the Re-Spin ends, any new Wilds appearing on the reels expand in the same way as the initial spin and wins are evaluated.

PAYOUT

Payout Summary

GAME RETURN TO PLAYER (RTP)

- RTP Total: 96.23%

ADDITIONAL INFORMATION

Randomisation

Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.

Game Simulation

A demo version of the game is available at <http://www.netent.com/games/>
