Game Theme and Graphics

Twin Spin DeLuxe™ Touch is a vibrant game with colorful symbols, a led board in the background, and Las Vegas style neon lights flashing at all times.

Twin Spin DeLuxe™ Touch has an energetic yet cool soundtrack that will get your toes tapping!

Main Game

Players can select the coin value and bet level before spinning the reels.

- **Game actions.** The buttons on the key pad perform the following different game actions:

BET LEVEL	Dragging or tapping the slider increases and decreases the bet level (i.e. number of coins per bet) by 1.
	Tapping the Spin button starts a game round at the current bet level and coin value.
COIN VALUE	Dragging or tapping the slider increases and decreases the coin value to the next level.
AUTOPLAY	Tapping the Autoplay button starts a game round automatically.
	Tapping the plus sign on the Quick Settings Menu button opens the quick settings menu. Player can choose to quick spin, and start autoplay without going to the settings menu.

Cluster Pays™ feature

Cluster Pays™

A symbol is part of a cluster if it is horizontally or vertically adjacent to the same symbol.

Only clusters consisting of 9 or more symbols award a win.

Multiple clusters of the same symbol that are not adjacent to each other count as separate clusters and pay separately.

Twin Reels feature

Twin Reel Feature

Each spin starts with identical, neighboring twin reels that are linked together and can appear adjacently on any of the 6 reels.

During the spin the twin reels can expand to become three, four, five or even six linked adjacent reels.

The number of reels that are linked together is random and occurs independently for each spin.

Randomisation

RANDOM NUMBER GENERATOR (RNG)

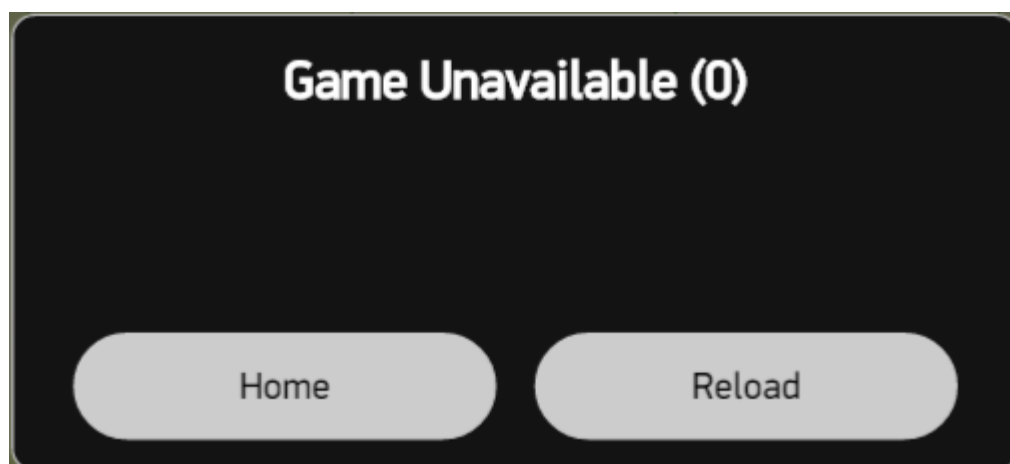

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

(Italy jurisdiction only) Further information on management of malfunctions is also described in section 3.2.1 of the Gaming Platform (Progetto Della Piattaforma Di Gioco) document. This document provides details on how a player is informed of balance return payments and the technical process.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
