

GONZO'S QUEST TOUCH™

Game Type: Touch Game

Return to Player: 95.97%

We are very proud to introduce our first Platinum video slot game, Gonzo's Quest™, in a version optimized for mobile touch devices. The new user-friendly touch interface gives a game experience richer than anything seen before.

As in the desktop version, Gonzo the Conquistador sets off to find the lost city of gold - Eldorado. Replacing the traditional reel spin, the game introduces the Avalanche™ feature whereby the symbols fall into place in the reels.

Game Theme & Graphics

This game has been designed to be more than just another video slot - with its high-quality animation sequences and sound that blends perfectly with the beautiful background of the Amazon rainforest, the game successfully brings to life a classic 16th century story for the player.

Loosely based on true historical events of 1541, Gonzo follows in the footsteps of the conquistador Gonzalo Pizarro who set off from his coastal base in Peru to find the lost city of gold known as Eldorado. In our story though, Gonzo is greedy, and decides to take the map and find the treasure for himself.

Game-specific animations include:

- 1 special Big Win animation which is triggered when a player has a big win (15x bet amount)
- Symbol fall animations
- Special symbol animations at the start of the Free Falls feature
- Animation showing amount of remaining Free Falls

Main Game

Gonzo's Quest Touch™ is a video slot developed for mobile devices.

- **Game rounds.** When the player taps the spin button, the bet amount is debited from the current credit (available coins and credit). The symbols automatically fall into position within the reels.
- **Game results.** Players can win on any of the 20 bet lines. The game highlights which symbols are the winning combinations and how much has been won on each bet line.

To further improve player experience, the amount in the Coins display counts up to match the win value. Meanwhile, game play for the round continues and the win amount with additional wins continues to count up.

At the end of the game round, the total winnings are added to the player's credits and displayed in Coins and cash field.

Wild Substitution

Gonzo's Quest has a Wild symbol that animates when displayed on a winning bet line.

- **Regular Wild substitution.** The Wild symbol substitutes for any symbol, including Free Fall symbols, to complete winning bet lines.

The Wild symbol changes its look to mimic whichever symbol it is replacing on the winning bet line.

Avalanches

A game round is made up of a series of Avalanches and if won, a number of Free Falls.

After the player has tapped the spin button, the initial Avalanche of symbols starts the game round. When the symbols have come to rest, winning bet lines are highlighted. If the player has a winning bet line, the win amount is added to the coins and cash displays field, the multiplier is increased, and the second Avalanche of symbols occurs.

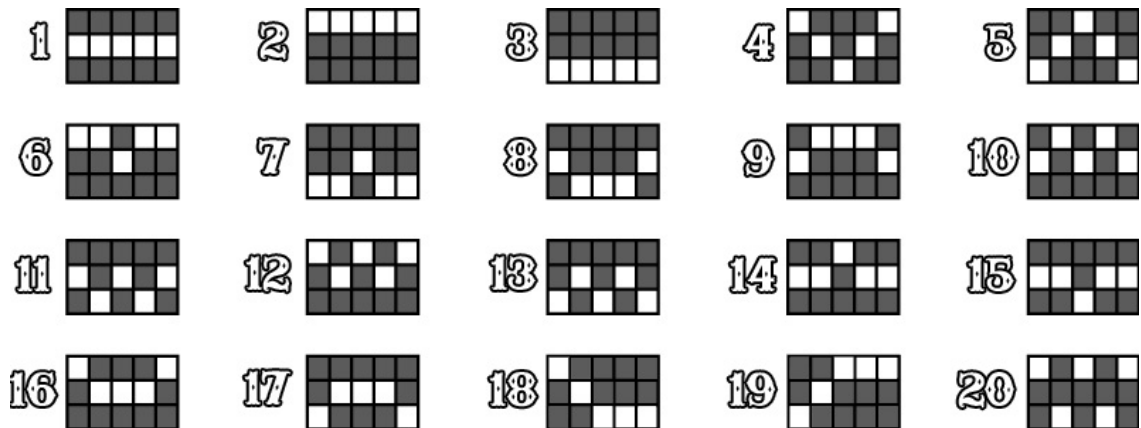

There is no limit to the number of Avalanches a player may experience in a game round; however the maximum multiplier is 5 in the main game and 15 in the Free Fall feature.

Free Fall

Gonzo's Quest Touch™ has an animated Free Fall symbol that gives the player a chance to enter the Free Fall feature.

- **Free Fall feature.** When 3 Free Fall symbols appear in succession on a bet line, 10 Free Falls are won. If 3 Free Fall symbols appear on two bet lines then 20 Free Falls are won.
- **Animation.** A short animation sequence sees the symbols part, as if they were a gateway and the player is informed about the number of Free Falls won.

ADDITIONAL INFORMATION

Randomisation

Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
